

16B Midterm 2 Statistics (002)

Here are the basic statistics from the first midterm. The table shows the scores at each percentile boundary. For example the 70th percentile is 112/125. This means that 30% of the class received 112 or above. The 50th percentile is where the median is, so exactly half the class scored 101 or above. Also indicated are the rough grade boundaries if your grade was to be decided on this test alone.

Remember your final letter grade is only determined once all your scores have been compiled so don't take these predictions too seriously. As indicated in the course policy if you're relative score in the final (i.e the percentile) is higher than your relative score in the lowest midterm it will replace it in your final grade computation.

100th Percentile	125	
95th Percentile	125	
90th Percentile	122	
85th Percentile	119	
80th Percentile	116.6	
75th Percentile	115	
70th Percentile	112	
65th Percentile	109.8	
60th Percentile	107	A-/B+ Boundary
55th Percentile	103	
50th Percentile	101	
45th Percentile	99.4	
40th Percentile	95	
35th Percentile	93	
30th Percentile	90	B-/C+ Boundary
25th Percentile	85	
20th Percentile	83	
15th Percentile	78	
10th Percentile	73	C-/D+ Boundary
5th Percentile	62	
0th Percentile	8
