

MATH 1A FINAL (PRACTICE 1)
PROFESSOR PAULIN

**DO NOT TURN OVER UNTIL
INSTRUCTED TO DO SO.**

CALCULATORS ARE NOT PERMITTED

**YOU MAY USE YOUR OWN BLANK
PAPER FOR ROUGH WORK**

**SO AS NOT TO DISTURB OTHER
STUDENTS, EVERYONE MUST STAY
UNTIL THE EXAM IS COMPLETE**

**REMEMBER THIS EXAM IS GRADED BY
A HUMAN BEING. WRITE YOUR
SOLUTIONS NEATLY AND
COHERENTLY, OR THEY RISK NOT
RECEIVING FULL CREDIT**

**THIS EXAM WILL BE ELECTRONICALLY
SCANNED. MAKE SURE YOU WRITE ALL
SOLUTIONS IN THE SPACES PROVIDED.
YOU MAY WRITE SOLUTIONS ON THE
BLANK PAGE AT THE BACK BUT BE
SURE TO CLEARLY LABEL THEM**

Name: _____

Student ID: _____

GSI's name: _____

This exam consists of 10 questions. Answer the questions in the spaces provided.

1. Calculate the following (you do not need to use the limit definition):

(a) (10 points)

$$\frac{d}{dx} \ln(3x)e^{2x}$$

Solution:

(b) (15 points)

$$\frac{d}{dx} \tan(e^{x^x})$$

Solution:

2. Calculate the following (you do not need to use the (ϵ, δ) -definition):

(a) (10 points)

$$\lim_{x \rightarrow 0} \frac{\sin(x^2)}{\tan x}$$

Solution:

(b) (15 points)

$$\lim_{x \rightarrow -\infty} \frac{\sqrt{1 + 4x^6}}{2 + x^3}$$

Solution:

3. Calculate the following (you do not need to use Riemann sum definition):

(a) (10 points)

$$\int \frac{2x + 4}{x^2 + 1} dx$$

Solution:

(b) (15 points)

$$\int_e^{e^2} \frac{1}{x \ln(x)} dx$$

Solution:

4. (25 points) A cup of water is placed in a refrigerator. The refrigerator has temperature 5°C . After 10 minutes the water is 15°C . After 20 minutes the water is 10°C . Determine the temperature of the water when it was placed in the refrigerator.

Solution:

5. (25 points) Sketch the following curve. Be sure to indicate asymptotes, local maxima and minima and concavity. Show your working on this page and draw the graph on the next page.

$$y = \frac{x^2 e^x}{x}$$

Solution:

Solution (continued) :

PLEASE TURN OVER

6. (25 points) Determine the equation of the tangent line at $x = 1$ of the following curve:

$$y = \int_x^{3x} \cos(\pi t) dt + 2x$$

Solution:

7. (25 points) An open box will be made by cutting a square from each corner of a 3 by 8 foot piece of cardboard and then folding up the sides. What size squares should be cut from each corner to maximize the volume.

Solution:

8. (25 points) A company accrues debt at a rate of

$$(2t + 3)\sqrt{t + 1}$$

dollars per year, where t is the time in years since the company started. How much will the company's debt have grown between $t = 3$ and $t = 8$? You do not need to simplify your answer.

Solution:

9. (25 points) Calculate the following limit:

$$\lim_{n \rightarrow \infty} \sum_{i=1}^n \frac{6n + 3i}{n^2} \sin\left(\left(2 + \frac{i}{n}\right)^2\right)$$

Solution:

10. Let $f(x) = 1/x$ and $g(x) = 4x$ $h(x) = x$.

- (a) (10 points) Calculate the area of the finite region bounded by $y = f(x)$, $y = g(x)$ and $y = h(x)$.

Solution:

- (b) (15 points) Calculate the volume of the solid of revolution formed by rotating this region around the x -axis.

Solution:
