

## L'Hospital's Rule

Suppose  $f$  and  $g$  are differentiable and  $g'(x) \neq 0$  on an open interval  $I$  containing  $a$  (except possibly at  $a$ ).

$$\lim_{x \rightarrow a} f(x) = \lim_{x \rightarrow a} g(x) = 0 / \infty / -\infty \Rightarrow \lim_{x \rightarrow a} \frac{f(x)}{g(x)} = \lim_{x \rightarrow a} \frac{f'(x)}{g'(x)}$$

↑  
Not obvious

### Remark

Also holds for  $x \rightarrow a^+ / a^- / \infty / -\infty$

### Examples

Conditions are met

1/  $\lim_{x \rightarrow 0} \frac{\sin(x)}{x} = \lim_{x \rightarrow 0} \frac{\cos(x)}{1} = \cos(0) = 1$

2/  $\lim_{x \rightarrow \infty} \frac{\ln(x)}{x^2+1} = \lim_{x \rightarrow \infty} \frac{(\frac{1}{x})}{2x} = \lim_{x \rightarrow \infty} \frac{1}{2x^2} = 0$

3/  $\lim_{x \rightarrow 0^+} x \ln(x) = \lim_{x \rightarrow 0^+} \frac{\ln(x)}{(1/x)} = \lim_{x \rightarrow 0^+} \frac{(\frac{1}{x})}{(-\frac{1}{x^2})}$   
 $= \lim_{x \rightarrow 0^+} -x = 0$

More generally :

$\lim_{x \rightarrow ?} f(x) = 0, \lim_{x \rightarrow ?} g(x) = \infty \Rightarrow \lim_{x \rightarrow ?} f(x)g(x) = ???$

Indeterminate form

$f(x)g(x) = \frac{f(x)}{(1/g(x))}$  ← Apply L'Hospital

$$4/ \lim_{x \rightarrow \infty} e^x - x = ?$$

Indeterminate Form

$$\lim_{x \rightarrow \infty} e^x = \infty, \lim_{x \rightarrow \infty} x = \infty \Rightarrow \lim_{x \rightarrow \infty} e^x - x = ???$$

$$\lim_{x \rightarrow \infty} e^x - x = \lim_{x \rightarrow \infty} x \left( \frac{e^x}{x} - 1 \right)$$

$$\lim_{x \rightarrow \infty} \frac{e^x}{x} \stackrel{\text{L'Hospital}}{=} \lim_{x \rightarrow \infty} \frac{e^x}{1} = \infty \Rightarrow \lim_{x \rightarrow \infty} x \left( \frac{e^x}{x} - 1 \right) = \infty$$

$$\lim_{x \rightarrow \infty} x = \infty$$

More generally:

$$\lim_{x \rightarrow ?} f(x) = \infty, \lim_{x \rightarrow ?} g(x) = \infty \Rightarrow \lim_{x \rightarrow ?} f(x) - g(x) = ???$$

Indeterminate Form

Convert to Product  $g(x) \cdot \left( \frac{f(x)}{g(x)} - 1 \right)$  and calculate

$\lim_{x \rightarrow ?} \frac{f(x)}{g(x)}$  using L'Hopital. If product is indeterminate

(ie  $\lim_{x \rightarrow ?} \frac{f(x)}{g(x)} = 1$ ) apply indeterminate product method.

$$5/ \lim_{x \rightarrow 0^+} x^x = ?$$

( Recall  $x = e^{\ln(x)}$  )

exponentials are cts.

$$\lim_{x \rightarrow 0^+} x^x = \lim_{x \rightarrow 0^+} e^{x \ln(x)} = e^{\lim_{x \rightarrow 0^+} x \ln(x)}$$

$$3/ \Rightarrow \lim_{x \rightarrow 0^+} x \ln(x) = 0 \Rightarrow \lim_{x \rightarrow 0^+} x^x = e^0 = 1$$

More generally,

$$\lim_{x \rightarrow ?} f(x) = 0^+, \quad \lim_{x \rightarrow ?} g(x) = 0$$

$$\lim_{x \rightarrow ?} f(x) = \infty, \quad \lim_{x \rightarrow ?} g(x) = 0$$

$$\lim_{x \rightarrow ?} f(x) = 1, \quad \lim_{x \rightarrow ?} g(x) = \infty$$

$$f(x)^{g(x)} = e^{g(x) \ln(f(x))} \Rightarrow \lim_{x \rightarrow ?} f(x)^{g(x)} = e^{\lim_{x \rightarrow ?} g(x) \ln(f(x))}$$

Indeterminate  
Form

$$\Rightarrow \lim_{x \rightarrow ?} (f(x))^{g(x)} = ???$$
