## 54 Midterm 1 Statistics (002)

Here are the basic statistics from the first midterm. The table shows the scores at each percentile boundary. For example the 70th percentile is 104/125. This means that 30% of the class received 104 or above. The 50th percentile is where the median is, so exactly half the class scored 94 or above. Also indicated are the rough grade boundaries if your grade was to be decided on this test alone.

Remember your final letter grade is only determined once all your scores have been compiled so don't take these predictions too seriously. As indicated in the course policy if you're relative score in the final (i.e the percentile) is higher than your relative score in the lowest midterm it will replace it in your final grade computation.

100th Percentile       125         95th Percentile       121         90th Percentile       116         85th Percentile       113         80th Percentile       109         75th Percentile       104         65th Percentile       101         65th Percentile       98         55th Percentile       96         50th Percentile       94         45th Percentile       91         40th Percentile       89         35th Percentile       86         30th Percentile       83         25th Percentile       78         20th Percentile       76         15th Percentile       71         10th Percentile       66         5th Percentile       58         0th Percentile       58         0th Percentile       21
