

54 Midterm 2 Statistics (002)

Here are the basic statistics from the first midterm. The table shows the scores at each percentile boundary. For example the 70th percentile is 107.9/125. This means that 30% of the class received 107.9 or above. The 50th percentile is where the median is, so exactly half the class scored 97 or above. Also indicated are the rough grade boundaries if your grade was to be decided on this test alone.

Remember your final letter grade is only determined once all your scores have been compiled so don't take these predictions too seriously. As indicated in the course policy if you're relative score in the final (i.e the percentile) is higher than your relative score in the lowest midterm it will replace it in your final grade computation.

100th Percentile	125	
95th Percentile	123	
90th Percentile	120	
85th Percentile	114	
80th Percentile	112	
75th Percentile	109	
70th Percentile	107.9	
65th Percentile	104	B+/A- Boundary
60th Percentile	103	
55th Percentile	99	
50th Percentile	97	
45th Percentile	93	
40th Percentile	91	
35th Percentile	86	
30th Percentile	81	C+/B- Boundary
25th Percentile	76	
20th Percentile	72	
15th Percentile	66	
10th Percentile	56	D+/C- Boundary
5th Percentile	41	
0th Percentile	0
