

## 54 Midterm 2 Statistics (001)

Here are the basic statistics from the first midterm. The table shows the scores at each percentile boundary. For example the 70th percentile is 103.5/125. This means that 30% of the class received 103.5 or above. The 50th percentile is where the median is, so exactly half the class scored 89 or above. Also indicated are the rough grade boundaries if your grade was to be decided on this test alone.

Remember your final letter grade is only determined once all your scores have been compiled so don't take these predictions too seriously. As indicated in the course policy if you're relative score in the final (i.e the percentile) is higher than your relative score in the lowest midterm it will replace it in your final grade computation.

100th Percentile	125	
95th Percentile	123	
90th Percentile	117.5	
85th Percentile	113	
80th Percentile	110	
75th Percentile	106	
70th Percentile	103.5	
65th Percentile	101	B+/A- Boundary
60th Percentile	98	
55th Percentile	94	
50th Percentile	89	
45th Percentile	86	
40th Percentile	82	
35th Percentile	78	
30th Percentile	74	C+/B- Boundary
25th Percentile	68	
20th Percentile	63	
15th Percentile	56	
10th Percentile	48.5	D+/C- Boundary
5th Percentile	36	
0th Percentile	0
