Regional Battleships

Place one copy of the fleet shown inside each black-edged region of the grid. The ships do not touch, not even diagonally, and cannot cross the boundaries of the regions. The number of ship segments in each row and column is indicated outside the grid. Some ship segments may be already placed.

Answer key: enter the lengths of the consecutive groups of unoccupied cells in each of the marked rows, from left to right. For two-digit numbers, only enter the last digit (e.g. enter '0' for a group of 10).

Notes: 1. The answer key used by LMI for the 2015 Puzzle Marathon was slightly different. 2. The given ship segment in the “M”-shaped region is actually not needed to ensure uniqueness of the solution.
