Section: _____

1. Consider the linear transformation $T : \mathbb{P}_2 \to \mathbb{R}$ given by $T(f) = \int_0^2 x^2 f(x)dx + f(0)$. Choose bases for $\mathbb{P}_2$ and $\mathbb{R}$ and compute the matrix of T with respect to that basis. Is T onto?

2. Let $\mathcal{B} = \{(3, 1), (-1, 7)\}$. This is a basis for $\mathbb{R}^2$. Compute the change of basis matrix $P_{\mathcal{B} \leftarrow std}$.

3. With $\mathcal{B}$ as in problem 2, compute $P_{std \leftarrow \mathcal{B}}$.
