-
- Please do not turn over this page until instructed to do so.
 - This exam contains 7 problems, of which we will score 6 problems. Indicate to us which 6 problems you would like us to grade by checking the small box at the top of the page. We will only grade 6 problems. Each problem is worth 10 points, for a total score of 60 points on this exam.
 - There are no notes or calculators allowed during the examination.
 - Should you finish during the last 15 minutes of the exam period, please remain seated *until we have collected all of the exams* as other students will still be working.
 - This exam contains 8 pages (including this page.)

1. Let $f(x)$ be the function whose graph is drawn below.

(a) (1 point) What is $f(3)$?

$$f(3) = 1$$

(b) (2 points) Explain whether or not the function $f(x)$ is one-to-one.

It is not as

$$f(1) = f(-1) = 1.$$

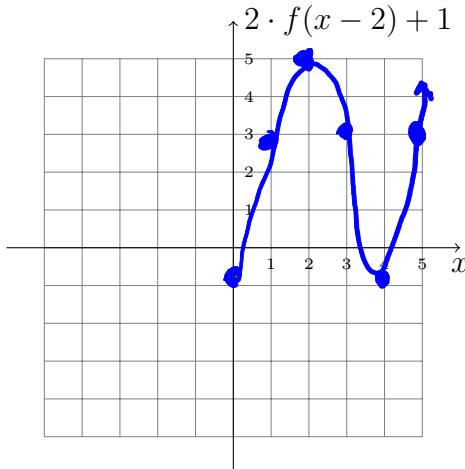

- (a) (2 points) Describe the domain and range of f in interval form.

Domain is $[-2, 3]$

Range is $[-1, 2]$.

- (c) (5 points) Draw the graph of the function $2 \cdot f(x - 2) + 1$ in the space below.

$2 \cdot f(x - 2) + 1$
*Shifted right 2
 Scaled vert. 2
 Shifted up 1*

2. Consider the functions given by the tables below.

x	f(x)
1	1
2	3
<u>3</u>	<u>4</u>
4	5
5	2

x	g(x)
1	4
2	4
3	2
4	2
5	3

(a) (1 point) What is $f(3)$?

$$f(3) = 4$$

(b) (2 points) Compute $(f \cdot g)(5)$.

$$f(5) = 2 \quad g(5) = 3 \quad (f \cdot g)(5) = 10$$

(c) (3 points) Compute $(g \circ f)(3)$.

$$g(f(3)) = g(4) = 2$$

(d) (4 points) Compute $(f^{-1} \circ g)(2)$.

$$f^{-1}(g(2)) = f^{-1}(4) = 3$$

3. (a) (5 points) Give the equation of a line containing the points $(4, 2)$ and $(2, 1)$.

$$m = \frac{2-1}{4-2} = \frac{1}{2}$$

$$(y-2) = \frac{1}{2}(x-4)$$

$$y - 2 = \frac{1}{2}x - 2$$

$$\boxed{y = \frac{1}{2}x}$$

- (b) (3 points) Find the equation of a line which passes through the origin and is perpendicular to the line from Part (a).

Slope of perpendicular is -2

$$\boxed{y = -2x}$$

- (c) (2 points) Find the point of intersection between the lines from Parts (a) and (b).

$$\begin{array}{l} y = \frac{1}{2}x \\ y = 2x \end{array} \quad \left. \begin{array}{l} \\ \end{array} \right\} 2x = \frac{1}{2}x \Rightarrow \frac{3}{2}x = 0 \Rightarrow x = 0$$

$$x = 0, y = 2x \Rightarrow y = 0$$

$$\boxed{(0, 0)}$$

4. (10 points) Describe the set of real numbers satisfying the inequality $|2x - 2| < x$ using interval notation.

$$|2x - 2| < x$$

$$\text{I} \quad 2x - 2 < 0$$

$$(\Rightarrow x < 1)$$

$$-(2x - 2) < x$$

$$-2x + 2 < x$$

$$2 < 3x$$

$$\frac{2}{3} < x$$

S_0

$$\frac{2}{3} < x \quad \text{and} \quad x < 1$$

$$\boxed{\frac{2}{3} < x < 1}$$

$$\text{II} \quad 2x - 2 \geq 0$$

$$(\Rightarrow x \geq 1)$$

$$2x - 2 < x$$

$$x - 2 < 0$$

$$x < 2$$

$$\boxed{S_0 \quad 1 \leq x < 2}$$

$$\frac{2}{3} < x < 1$$

$$1 \leq x < 2$$

$$\boxed{\frac{2}{3} < x < 2.}$$

5. Consider the function

$$f(x) = \frac{x+1}{x-1}$$

(a) (2 points) Write the domain of $f(x)$ using interval notation.

\times cannot be 1.
(-\infty, 1) \cup (1, \infty)

(b) (5 points) Write a equation for the function $f^{-1}(y)$.

$$\begin{aligned} y &= \frac{x+1}{x-1} \\ y(x-1) &= x+1 \\ yx-y &= x+1 \\ yx-x &= y+1 \end{aligned} \quad \left. \begin{aligned} x(y-1) &= y+1 \\ x &= \frac{y+1}{y-1} \\ f^{-1}(y) &= \frac{y+1}{y-1} \end{aligned} \right\}$$

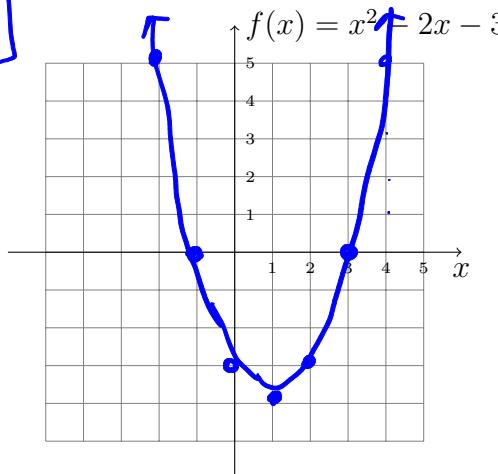

(c) (3 points) Write down the the domain and range of $f^{-1}(y)$ using interval notation.

$$\begin{aligned} \text{Range of } f^{-1}(y) &= \text{Domain of } f(x) \\ &= (-\infty, 1) \cup (1, \infty). \end{aligned}$$

$$\text{Domain of } f^{-1}(y) \text{ is } (-\infty, 1) \cup (1, \infty).$$

6. (10 points) Graph the parabola given by the function. $f(x) = x^2 - 2x - 3$ in the space below. Find and mark the zeros and the vertex of the parabola.

by completing to square

$$f(x) = x^2 - 2x + (1 - 1) - 3$$

$$= (x-1)^2 - 4$$

vertex is (1, -4)

$$f(x) = x^2 - 2x - 3$$

$$= (x-3)(x+1)$$

zeros are 3, -1.

7. (10 points) Find all points where the line $y = \frac{3}{4}x$ intersects the circle of radius 5 centered at the origin.

$$y = \frac{3}{4}x$$

$$x^2 + y^2 = 5^2$$

$$x^2 + \left(\frac{3}{4}x\right)^2 = 5^2$$

$$x^2 + \frac{9}{16}x^2 = 25$$

$$16x^2 + 9x^2 = 25 \cdot 16$$

$$25x^2 = 25 \cdot 16$$

$$x^2 = 16$$

$$x = \pm 4$$

$$y = \pm 3$$

(4, 3) and
(-4, -3).
