## Question 1

Solve the following nonhomogeneous equations.

$$
\begin{gathered}
y^{\prime \prime}-3 y^{\prime}+4 y=\sin (2 x) \\
y^{\prime \prime}-3 y^{\prime}+2 y=x e^{3 x} \\
y^{\prime \prime}-3 y^{\prime}+2 y=e^{x} \\
y^{\prime \prime}-3 y^{\prime}+2 y=(2 x-1) e^{2 x} \\
y^{\prime \prime}+y=\sin (x)+e^{x} \\
y^{\prime \prime}+2 y^{\prime}+2 y=e^{-x} \sin (x)+e^{x}
\end{gathered}
$$

## Question 2

Solve the following differential equation using a power series solution. (Second one is from the textbook exercises).

$$
\begin{gathered}
y^{\prime \prime}-4 y=0 \\
y^{\prime \prime}+x y^{\prime}+y=0
\end{gathered}
$$
