This exam consists of 10 problems, each worth 10 points, of which you must complete 8. **Choose two problems not to be graded by crossing them out in the box below.** You must justify every one of your answers unless otherwise directed.

Problem	Maximum Score	Your Score
1	10	
2	10	
3	10	
4	10	
5	10	
6	10	
7	10	
8	10	
9	10	
10	10	
Total Possible	80

1. Let V be a nonzero finite-dimensional real vector space. Suppose $T : V \to V$ is a linear transformation.

Decide if the following assertions are ALWAYS TRUE or SOMETIMES FALSE. You need not justify your answer.

i. There exists an eigenvalue of T.

ii. There exists a basis of V such that T is upper-triangular.

iii. $\dim V = \dim null(T) + \dim range(T)$

iv. If v and w are colinear, then Tv and Tw are colinear.

v. If v and w are linearly independent, then Tv and Tw are linearly independent.

vi. If T is invertible and λ is an eigenvalue of T, then λ^{-1} is an eigenvalue of T^{-1}.

vii. If T is invertible and v is an eigenvector of T, then v is an eigenvector of T^{-1}.

viii. If $T^2 = 1$, then T has an eigenvalue.

ix. If $T^3 = T^2$, then T has an eigenvalue.

x. If $T^3 = T^2$, then $null(T) \neq \{0\}$.

2. Let V be an inner product space and $v_1, \dots, v_n$ a list of vectors in V.

(a) State what it means for $v_1, \dots, v_n$ to be linearly independent. State what it means for $v_1, \dots, v_n$ to be orthonormal.

(b) Prove that if $v_1, \dots, v_n$ is orthonormal, then $v_1, \dots, v_n$ is linearly independent.

Name (Last, First): ____________________

3. Let $A \in M_{n\times n}(\mathbb{C})$ be a complex matrix. Consider the subspace $W \subset M_{n\times n}(\mathbb{C})$ given by

$$W = span\{I, A, A^2, A^3, \ldots, A^k, \ldots\}$$

Prove that

$$\dim W \leq n.$$

Name (Last, First): ____________________

4. Consider $\mathbb{C}^3$ with the standard Euclidean inner product. Determine whether each of the following operators $T : \mathbb{C}^3 \to \mathbb{C}^3$ is self-adjoint, normal, or neither. You need not justify your answer.

a. T has eigenvectors $(1, 0, 0)$, $(0, 1, 0)$, $(0, 0, 1)$ with respective eigenvalues $0, 1 + i, 1 - i$.

b. T has eigenvectors $(1, i, 0)$, $(1, -i, 0)$, $(0, 0, 1)$ with respective eigenvalues $1, -1, 0$.

c. T has eigenvectors $(1, 0, 0)$, $(0, i, -i)$, $(1, 1, 1)$ with respective eigenvalues $1, -1, 1$.

d. $\dim null(T^2) = 3$, $\dim range(T) = 1$.

e. $\dim null(T - i) = 2$, $\dim null(T) = 1$ with $null(T - i) \perp null(T)$.

Name (Last, First): ____________________

5. Find a basis for $\mathbb{C}^3$ that puts the operator given by the matrix

$$T = \begin{pmatrix} 0 & 0 & 0 \\ 1 & 0 & 0 \\ 1 & 1 & 0 \end{pmatrix}$$

into Jordan canonical form. What is the Jordan canonical form?

Name (Last, First): ______________________________

6. Consider $\mathbb{R}^2$ with the inner product

$$\langle (x_1, x_2), (y_1, y_2) \rangle = 2x_1y_1 + x_1y_2 + x_2y_1 + x_2y_2$$

a. Find an orthonormal basis for $\mathbb{R}^2$ with respect to the above inner product.

b. Find the vector $v = (a, b)$ closest to $(1, 0)$ satisfying $a + b = 0$.

Name (Last, First): ____________________

7. Find the Jordan form of an operator $T : \mathbb{C}^5 \to \mathbb{C}^5$ given the following information:

$\dim null(T^2) = 2 \qquad \dim null(T^3) = 3 \qquad \dim null((T-1)^2) = 2 \qquad \dim range(T-1) = 4$

Be sure to justify your answer.

Name (Last, First): ______________________________

8. Consider the following matrices:

$$T_1 = \begin{pmatrix} 0 & 0 & 0 \\ 1 & 0 & -1 \\ 0 & 0 & 0 \end{pmatrix} \qquad T_2 = \begin{pmatrix} 0 & -1 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 0 \end{pmatrix} \qquad T_3 = \begin{pmatrix} 0 & -1 & 0 & 0 \\ 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \end{pmatrix}$$

$$T_4 = \begin{pmatrix} 0 & 0 & 0 & 0 \\ 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & -1 \\ 0 & 0 & 0 & 0 \end{pmatrix} \qquad T_5 = \begin{pmatrix} 0 & -1 & 0 & 0 & 0 \\ 1 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 1 \\ 0 & 0 & 0 & 0 & 0 \end{pmatrix} \qquad T_6 = \begin{pmatrix} 0 & -1 & 0 & 0 & 0 \\ 1 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 1 \\ 0 & 0 & 0 & -1 & 0 \end{pmatrix}$$

Which of the matrices has minimal polynomial $m(z) = z^3 + z$? Be sure to justify your answer.

9. Consider the matrix

$$T = \begin{pmatrix} 1 & -1 \\ -1 & 1 \end{pmatrix}$$

Calculate T^{100} applied to the vector $(3, 2)$.

Name (Last, First): ____________________

10. Let V be a complex vector space of dimension n. Suppose $T : V \to V$ satisfies $T^n = 0$ but $T^{n-1} \neq 0$. Show that there is a vector $v \in V$ such that the list $v, Tv, T^2v, \dots, T^{n-1}v$ is a basis.
