

Math 10B with Professor Stankova

Quiz 3; Tuesday, 2/6/2018

Section #211; Time: 11 AM

GSI name: Roy Zhao

Name: _____

Circle True or False or leave blank. (1 point for correct answer, -1 for incorrect answer, 0 if left blank)

1. True False The number of ways there are to flip 2 heads out of 5 total flips is $P(5, 2)$ because the order of the coin flips matters.
2. True False It is impossible to devise an algorithm to solve the stable marriage problem if men can marry other men (the “roommate problem”).

Show your work and justify your answers. Please circle or box your final answer.

3. (10 points) (a) (4 points) How many ways can I buy 200 bubble teas from TeaOne for an event if there are 10 different options to choose from?

- (b) (4 points) The most popular option is original milk tea. How many ways can I do this if I need at least 20 of that option and at least 10 of every other option?

- (c) (2 points) Suppose men and women have the preferences $m_1 : w_1 > w_3 > w_2, m_2 : w_3 > w_1 > w_2, m_3 : w_3 > w_2 > w_1$ and $w_1 : m_1 > m_2 > m_3, w_2 : m_2 > m_3 > m_1, w_3 : m_3 > m_2 > m_1$. Is the matching $(m_1, w_1), (m_2, w_3), (m_3, w_2)$ stable?
