Math 10B with Professor Stankova

Quiz 4; Tuesday, 2/13/2018 Section #203; Time: 9:30 AM

GSI name: Roy Zhao Name: \_\_\_\_\_

Circle True or False or leave blank. (1 point for correct answer, -1 for incorrect answer, 0 if left blank)

1. True **FALSE** If we want to show that the statements  $S_n$  are true for all  $n \geq 0$ , we need to prove the base case n = 1.

**Solution:** The base case is n = 0.

2. **TRUE** False When  $A \subset B$ , the conditional probability P(A|B) can be expressed as the fraction  $\frac{P(A)}{P(B)}$  (given all involved quantities are well-defined).

**Solution:** Since  $A \subset B$ , we know that  $A \cap B = A$  and hence

$$P(A|B) = \frac{P(A \cap B)}{P(B)} = \frac{P(A)}{P(B)}.$$

Show your work and justify your answers. Please circle or box your final answer.

3. (10 points) (a) (4 points) Prove that  $1+2+\cdots+n=\frac{n(n+1)}{2}$  for all  $n\geq 1$ .

**Solution:** First we prove the base case n = 1. Then the LHS is 1 and the RHS is  $\frac{1(1+1)}{2} = 1$  =LHS as required.

Now assume the inductive hypothesis IH:  $1+2+\cdots+n=\frac{n(n+1)}{2}$  for some  $n\geq 1$ . Now we want to prove that  $1+2+\cdots+(n+1)=\frac{(n+1)(n+2)}{2}$ . We have that the left hand side is

$$LHS = (1+2+\cdots+n)+(n+1) \stackrel{IH}{=} \frac{n(n+1)}{2}+n+1 = \frac{n^2+n+2n+2}{2} = \frac{n^2+3n+2}{2}.$$

And

$$RHS = \frac{(n+1)(n+2)}{2} = \frac{n^2 + 3n + 2}{2} = LHS.$$

Finally, by MMI, we know that  $1 + 2 + \cdots + n = \frac{n(n+1)}{2}$  for all  $n \ge 1$ .

(b) (3 points) What is the probability that when picking a hand of 5 cards out of a deck of 52 cards, you pick at least one ace?

**Solution:** We can solve this via complementary probability. We have that  $P(\geq 1A) = 1 - P(< 1A) = 1 - P(0A)$  and  $P(0A) = \frac{\binom{48}{5}}{\binom{52}{5}}$ . Thus, we have that

$$P(\ge 1Ace) = 1 - \frac{\binom{48}{5}}{\binom{52}{5}}.$$

(c) (3 points) What is the probability that when picking a hand of 5 cards out of a deck of 52 cards, you pick exactly two aces given that you have at least one ace?

**Solution:** We can calculate the probability of picking two aces. The number of ways of picking two aces is  $\binom{4}{2} \cdot \binom{48}{3}$  and the total number of ways is  $\binom{52}{5}$ . Thus, the conditional probability is

$$P(2A| \ge 1A) = \frac{P(2A \cap \ge 1A)}{P(\ge 1A)} = \frac{P(2A)}{P(\ge 1A)} = \frac{\frac{\binom{4}{2}}{\binom{48}{3}}}{1 - \frac{\binom{48}{5}}{\binom{52}{5}}}$$
$$= \frac{\binom{4}{2}\binom{48}{3}}{\binom{52}{5} - \binom{48}{5}}.$$
